

LMU Clock Overlay

User Guide

Version 1.3.0

Author: cento789

A lightweight, fully transparent system clock overlay for Le Mans Ultimate and any other fullscreen or windowed game. Built because TinyPedal doesn't include a real-time clock.

1. Features

- **Real-time system clock** updated every 200ms

Fully transparent only the text is visible on screen

Always on top stays visible over fullscreen and borderless games

Draggable click and drag to reposition anywhere

Settings menu configure everything with a live preview before starting

Font selector choose from 9 fonts (Consolas, Arial, Segoe UI, Verdana, etc.)

Font size adjustable from 10 to 60 pixels

Color picker full RGB color chooser

Opacity control from 20% to 100% transparency

12h / 24h format switch between 15:30:00 and 03:30:00 PM

Date display optional date shown below the time (dd/mm/yyyy)

Text shadow dark drop shadow for readability on bright backgrounds

System tray minimizes to the notification area after start

Global hotkey Ctrl+Shift+H to toggle visibility in-game

Persistent settings all preferences and position saved automatically

2. In

No installation required. LMU Clock Overlay is a portable, standalone .exe file.

Steps:

1. Download LMUClockOverlay.exe
2. Place it in any folder
3. Double-click to run

Note: On first launch, Windows SmartScreen may show a warning. Click 'More info' then 'Run anyway' to

proceed.

3. Settings Menu

When you launch the application, a dark-themed settings window appears. All options update the live preview in real-time so you can see exactly how the overlay will look before starting.

Setting	Description
Font	Dropdown with 9 font families
Font size (px)	Slider from 10 to 60 pixels
Color	Click 'Pick Color' to open system color chooser
Opacity	Slider from 20% (very transparent) to 100% (solid)
Format	Radio buttons: 24h or 12h (AM/PM)
Show date	Checkbox to display date below the clock
Text shadow	Checkbox to add dark shadow behind text

Click the green START button to launch the overlay and minimize to the system tray.

4. In-Game Controls

Once the overlay is running, you can interact with it while gaming:

Action	How
Move overlay	Left-click and drag
Hide / Show	Press Ctrl+Shift+H
Close overlay	Right-click on the overlay text

5. System Tray

After pressing START, the application minimizes to the Windows system tray (notification area, near the clock). A small clock icon appears there.

Right-click the tray icon for options:

- Show/Hide (Ctrl+Shift+H) - toggle the overlay
- Quit - close the application and save settings

6. Settings Persistence

All settings are automatically saved when you close the overlay and restored the next time you launch the application. This includes:

- Font family, size, and color

- Opacity level
- Time format (12h/24h)
- Date display toggle
- Text shadow toggle
- Overlay position on screen

Settings are stored in:

%APPDATA%\LMUClockOverlay\settings.json

To reset all settings, simply delete this file.

7. Tips for Le Mans Ultimate

- **Display mode:** Run LMU in Borderless Windowed mode for best overlay compatibility.

Positioning: Use a small font size (14-20px) and position the clock in a corner that doesn't overlap with game HUD.

Readability: Enable text shadow if racing on tracks with bright environments (e.g., Bahrain, COTA) for better readability.

Opacity: Use the opacity slider to make the clock less distracting during intense racing moments.

Quick hide: Use Ctrl+Shift+H to quickly hide the overlay during moments where you need full screen visibility (replays, menus).

8. Command Line

You can run the following command to check the version:

```
LMUClockOverlay.exe --version
```

This will print: "LMU Clock Overlay v1.3.0 by cento789"

9. Building from Source

Requirements: Python 3.10+

Install dependencies:

```
pip install pyinstaller pystray Pillow keyboard
```

Build command:

```
pyinstaller --onefile --noconsole --name LMUClockOverlay
--version-file version_info.py
--hidden-import pystray._win32 clock_overlay.py
```

The built executable will appear in the dist/ folder.
